proposed move to System F

At the Manticore meeting on 11/7/07, we discussed moving BOM in the direction of System F.

The following summarize the proposed changes to the <code>BOM</code> module:

New syntactic forms:

- let x : tau = y [tauVec]
- apply f [tauVec] [... / ...]
- let x : tau = CONS [tauVec] (...)
- let x : tau = CONST [tauVec]
- throw k [tau] (...)

New types:

- alpha (* type variables *)
- forall alphaVec . tau
- T [tauVec]
- tau + tau

Here are the changes to the datatypes in the <code>BOM</code> module:

datatype term

```
= ...
```

```
E_Apply of (var * ty list * var list * var list)
E_Throw of (var * ty list * var list)
E_HLOp of (hlop * ty list * var list * var list)
```

and rhs

```
= ...
```

```
E_TyApply of (var * ty list)
E_DCon of (data_con * ty list * ty list)
```

and lambda = FB of

```
Unknown macro: { f }
```

and pat

```
= P_DCon of (data_con * ty list * var list)
```

```
P_DConst of (data_con * ty list)
...
```

and the changes to the BOMTy module:

datatype ty

```
= T_Var of ty_var
```

```
T_Forall of (ty_var list * ty)
T_TyCon of (tyc * ty list)
```

```
```

We'll also need to add the <code>ty_var</code> type and make changes to the representation of <code>tyc</code>.
