proposed move to System F

At the Manticore meeting on 11/7/07, we discussed moving BOM in the direction of System F.

The following summarize the proposed changes to the `<code>BOM</code>` module:

New syntactic forms:

- `let x : τ = y [τVec]`
- `apply f [τVec] (... / ...)`
- `let x : τ = CONS [τVec] (... )`
- `let x : τ = CONST [τVec]`
- `throw k [τ] ( ... )`

New types:

- `α (* type variables *)`
- `forall αVec . τ`
- `T [τ]`
- `τ + τ`

Here are the changes to the datatypes in the `<code>BOM</code>` module:

datatype term
= ...

```
E_Apply of (var * ty list * var list * var list)
E_Throw of (var * ty list * var list)
E_HLOp of (hlop * ty list * var list * var list)
```

and rhs
= ...

```
E_TyApply of (var * ty list)
E_DCon of (data_con * ty list * ty list)
```

and lambda
= FB of

```
Unknown macro: { f }
```

and pat
= P_DCon of (data_con * ty list * var list)

```
P_DConst of (data_con * ty list)
...
```

and the changes to the BOMTy module:

datatype ty
= T_Var of ty_var

```
T_Forall of (ty_var list * ty)
T_TyCon of (tyc * ty list)
```

We'll also need to add the `<code>ty_var</code>` type and make changes to the representation of `<code>tyc</code>`.
