proposed move to System F

At the Manticore meeting on 11/7/07, we discussed moving BOM in the direction of System F.

The following summarize the proposed changes to the `<code>BOM</code>` module:

New syntactic forms:

- `let x : tau = y [tauVec]
- apply f [tauVec] (... / ...)
- let x : tau = CONS [tauVec] ( ... )
- let x : tau = CONST [tauVec]
- throw k [tau] (...)

New types:

- `alpha (* type variables *)`
- `forall alphaVec . tau`
- `T [tauVec]`
- `tau + tau`

Here are the changes to the datatypes in the `<code>BOM</code>` module:

```
datatype term
  = ...
  E_Apply of (var * ty list * var list * var list)
  E_Throw of (var * ty list * var list)
  E_HLOp of (hiop * ty list * var list * var list)
```

and `rhs`

```
  = ...
  E_TyApply of (var * ty list)
  E_DCon of (data_con * ty list * ty list)
```

and `lambda = FB of`

```
  Unknown macro: { f }
```

and `pat`

```
  = P_DCon of (data_con * ty list * var list)
    P_DConst of (data_con * ty list)
    ...
```

and the changes to the BOMTy module:

```
datatype ty
  = T_Var of ty_var
  T_Forall of (ty_var list * ty)
  T_TyCon of (tyc * ty list)
```

We'll also need to add the `<code>ty_var</code>` type and make changes to the representation of `<code>tyc</code>`.s.
