Connecting to Beagle2

How to log in

The login node is login.beagle.ci.uchicago.edu and the basic way to access it from a Unix-like environment is:

\texttt{ssh your\_user\_name@login.beagle.ci.uchicago.edu}

Beagle2 has 5 login nodes. You will be randomly connected to one of those 5 when you \texttt{ssh} to login.beagle.ci.uchicago.edu

HOWEVER THIS WILL NOT WORK IF YOU HAVEN'T SET UP YOUR SSH PUBLIC KEY AUTHENTICATION, SEE BELOW.

To set up SSH Public Key Authentication see the relevant page on SshKeys.
On the same page you will also find information about how to login from other environments such as Windows and OS X (Apple's MACs).
