Text boxes - Panels

You can put your text into text boxes (the wiki calls them "panels"), as in the example below.

<table>
<thead>
<tr>
<th>Panel Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>This is a panel. This is the default appearance. But you can change how the border looks, the background color and the font color.</td>
</tr>
</tbody>
</table>

This is another text panel
For example, you can change the border and the font color to maroon.

To create text Panel:

1. On the editing toolbar select Insert > Other Macros
2. Search for Panel
3. Follow the instructions there.
